

Code Challenge

We are looking for passionate and creative people who want to take an active part in shaping the future of journalism within the context of digital media. Are you open to trying new things? Are you confident, driven and clever? Then apply for a role now with SPRING Axel Springer Digital News Media GmbH & Co. KG. At SPRING, innovation is at the core of our ethos, we endeavour to invest in new technologies as much as we can, our culture also encourages our employees to seek out novel solutions for challenging problems.

With this code challenge we want to get a glimpse on your iOS coding skills and your approach to problem solving. You should strive to create a readable, maintainable and well structured codebase over implementing a fancy design or adding more features than required.

You can choose the architecture, libraries and technologies you find more appropriate for this project. Within a limited time of 5-8 hours, you will have to pick areas of the app to focus on – we don't expect to get a perfect app as a result.

Code Challenge

Create an app that enables the user to search for Github users and displays the results of that search in a list. Each result item should display at least:

- The user image
- The user name

Bonus:

Show a detail view when clicking a detail item. It will display

- Number of public repositories
- Number of followers

Any other information is optional.

Please choose the Github Version you find more convenient, and justify the decision.

Code Challenge

First Screen (Standard):

- Search Bar
- Items list with user name and image on each item

Second Screen (Bonus):

- Detail View
- Number of public repositories and followers. Any other information is optional
